$$f(x) = \sin(x)$$

First we might ask where the derivative of $f(x) = \sin(x)$ is zero. Then ask, where is it positive or negative? If we graph this information, we get something like:

$$f'(x)$$

What does this look like?

Cosine

Consider the function $g(x) = \cos(x)(3 + \tan(x)) + 4 \tan(x)$.
What is $g'(x)$?

- ❶ $g'(x) = -3 \sin(x) + \cos(x) + 4 \sec^2(x)$
- ❷ $g'(x) = 3 \cos(x) + \sin(x) + 4 \sec^2(x)$
- ❸ $g'(x) = -\sin(x)(\sec^2(x)) + 4 \sec^2(x)$
- ❹ $g'(x) = -\sin(x) + 5 \sec^2(x)$

We will now consider functions of the form $F(x) = f(x)g(x)$.

Let's consider the derivative of $f(x)g(x) = (x^2 + 1)(x^3)$.

$$\frac{d}{dx} ((x^2 + 1)(x^3)) = \frac{d}{dx} (x^5 + x^3) = 5x^4 + 3x^2$$

What if we tried to just take the derivative of each?

$$\frac{d}{dx}(x^2 + 1) \frac{d}{dx}(x^3) = (2x)(3x^2) = 6x^3 \neq 5x^4 + 3x^2$$

Let's consider the definition of the derivative:

$$\frac{d}{dx}(f(x)g(x)) = \lim_{h \rightarrow 0} \frac{f(x+h)g(x+h) - f(x)g(x)}{h}$$

For the next step we will add 0, that is: $f(x+h)g(x) - f(x+h)g(x)$

$$= \lim_{h \rightarrow 0} \frac{f(x+h)g(x+h) + \textcolor{red}{f(x+h)g(x)} - \textcolor{red}{f(x+h)g(x)} - f(x)g(x)}{h}$$

$$= \lim_{h \rightarrow 0} \left[f(x+h) \frac{g(x+h) - g(x)}{h} + g(x) \frac{f(x+h)g(x) - f(x)}{h} \right]$$

$$= \lim_{h \rightarrow 0} f(x+h) \frac{g(x+h) - g(x)}{h} + \lim_{h \rightarrow 0} g(x) \frac{f(x+h)g(x) - f(x)}{h}$$

3.3 The

Product Rule

Product Rule

If $u = f(x)$ and $v = g(x)$ are differentiable functions, then:

$$(fg)' = f'g + fg'.$$

The product rule can also be written

$$\frac{d(uv)}{dx} = \frac{du}{dx}v + u\frac{dv}{dx}.$$

In words:

The derivative of a product is the derivative of the first times the second plus the first times the derivative of the second.

3.3 The

Product Rule

Consider the function $F(x) = 4e^x \cos(x)$. Find $F'(x)$.

In this example, $F(x) = f(x)g(x)$ where $f(x) = 4e^x$ and $g(x) = \cos(x)$. Using the product rule,

$$\begin{aligned} F'(x) &= f'g + fg' = 4e^x \cos(x) + 4e^x(-\sin(x)) \\ &= 4e^x(\cos(x) - \sin(x)). \end{aligned}$$
